

Before installation:

- When unboxing the units check that all units are in good condition
- Before installing, check that all bolts are still on 4 N.m (Newton meter torque)
- Also check that the black grommet on the top of the unit is tightened
- The reason for this is, that the bolts and grommet can be shaken loose during transport
- Scan the QR code for all additional information

Installing units:

- Use the two eye bolts to fasten the unit with a support (Rope or any support system) so that there is no weight carried by the supply cable

- Under no circumstances pull the unit up on its supply cable, always use the support
- The light fitting must have water flowing past it at all times when operating
- Water temperature can not exceed 35 degrees. If more it will damage the light fitting
- No chemicals must be present in the water that the fitting is being used in
- The fitting must not be opened for any reason

Taking care of the unit:

- Clean only with water and a soft cloth, never use chemicals or any type of brush on the cylinder
- If the led lamp stops working, do not attempt to remove any bolts on the unit. Report the unit by quoting the serial number (The yellow tag on the end of the lead example (SSL-0200-00-10-0000))
- Visit the website www.southernsalmonlights.com and send us an email or use the QR code

Warnings:

- Do not energise the unit outside of water otherwise it will overheat
- Do not pull on the supply cable
- Handle with care
- Do not open unit

Certification:

- All certifications are on the website, use Qr code

Contact:

- All contact information is on the website, use QR code
